

FOR IMMEDIATE RELEASE

iSHOP Version 4.2.3 PACKS A PUNCH OF FEATURES

LogicData's Senior Application Architect, Kevin Wood is excited to announce the release of the new version of iShop for SyteLine (v. 4.2.3). This newest version of iShop for SyteLine offers a range of added modules and updates designed to meet businesses' needs and wants.

iShop is a fully integrated SyteLine storefront with catalogue features and credit card processing capabilities. The product gives businesses the ability to have their customers browse and purchase products and pay outstanding invoices with real-time updating from SyteLine.

"We've streamlined things a lot," Kevin Wood explains of the newest version, which includes a Product Selector Module, Google Analytics integration and an upgraded Telerik RAD Editor for easier editing. Each feature has been added to provide more usability to iShop and integrate the most advanced trends in Storefront Software packages. Other features of note have been added and include SSL Support and enhanced Shipping Configurations.

iShop for SyteLine enables businesses to broaden their reach and engage customers with an easy-to-install and operate platform. This newest version makes it all the more easy.
